Step 1: Install the damper in the duct as required.

Step 2: Pass the damper control cable through the duct to the air device or the remote adjustment point. For GCODR, mount gear mechanism to either the wall of the plenum using the angle bracket, or remove the angle bracket and mount it to the air device.

Step 3: Adjust the damper blade position for proper air flow. For CODR, loosen the locking set screw closest to the looped wire end of the control cable, push or pull the looped wire end of the control cable and tighten the set screw nearest to the looped wire end of the cable to lock the damper blade in the desired position. Store the control cable appropriately. For GCODR, rotate the ¼” control shaft of the gear mechanism CW or CCW using a medium flat head screw driver or a ¼” nut driver.

For adjustments, repeat Step 3 as needed.

NOTE: A ¼” ‘deep’ socket may be required to make adjustments when the gear mechanism is mounted to the ceiling box.
**INTERNAL CABLE - CODS & GCODS**

**Step 1:** Cut 4-1/8" wide slot into the side of the sheet metal duct.

**Step 2:** If desired, install gasket around the damper frame per the enclosed instructions.

**Step 3:** Insert the damper control cable into the slot cut into the ductwork and slide the damper into the ductwork.

**Step 4:** Secure the damper to the ductwork with the screws provided.

**Step 5:** Pass the damper control cable through the duct to the air device or the remote adjustment point. For GCODS, mount gear mechanism to either the wall of the plenum using the angle bracket, or remove the angle bracket and mount it to the air device.

**Step 6:** Adjust the damper blade position for proper air flow. For CODS, loosen the locking set screw closest to the looped wire end of the control cable, push or pull the looped wire end of the control cable and tighten the set screw nearest to the looped wire end of the cable to lock the damper blade in the desired position. For GCODS, rotate the ¼" control shaft of the gear mechanism CW or CCW using a medium flat head screw driver or a ¼" nut driver. For adjustments, repeat Step 6 as needed.

**NOTE:** A ¼" 'deep' socket may be required to make adjustments when the gear mechanism is mounted to the ceiling box.

**EXTERNAL CABLE - XCODS & GXCODS**

**Step 1:** Cut 4-1/8" wide slot into the side of the sheet metal duct.

**Step 2:** If desired, install gasket around the damper frame per the enclosed instructions.

**Step 3:** Slide the damper into the duct work.

**Step 4:** Secure the damper to the ductwork with the screws provided.

**Step 5:** Route the damper control cable to the remote adjustment point, being sure to avoid severe bending or kinking of the control cable. For XGCODS, mount gear mechanism to either the wall of the plenum using the angle bracket, or remove the angle bracket and mount it to the air device.

**Step 6:** Adjust the damper blade position for proper air flow. For XCODS, loosen the locking set screw closest to the looped wire end of the control cable, push or pull the looped wire end of the control cable and tighten the set screw nearest to the looped wire end of the cable to lock the damper blade in the desired position. For XGCODS, rotate the ¼" control shaft of the gear mechanism CW or CCW using a medium flat head screw driver or a ¼" nut driver. For adjustments, repeat Step 6 as needed.

**NOTE:** A ¼" 'deep' socket may be required to make adjustments when the gear mechanism is mounted to the ceiling box.

---

**Install all devices in accordance with applicable electrical and mechanical codes.**

**ALL DUROZONE DAMPERS FEATURE:**
- 5 year limited warranty
- Controlled bypass
- Maintenance free operation
- 100% factory testing

Special controls are available on request.
